**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	Application No.	Applicant(s)
	09/886,064	HAITSMA ET AL.
	Examiner	Art Unit
	Shin-Hon Chen	2131

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 03 May 2007.
- 2a) This action is **FINAL**.                            2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1-22 is/are rejected.
- 7) Claim(s) \_\_\_\_\_ is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 21 June 2001 is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a) All    b) Some \* c) None of:
    1. Certified copies of the priority documents have been received.
    2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) Notice of Informal Patent Application
- 6) Other: \_\_\_\_\_

**DETAILED ACTION**

1. Claims 1, 3-6, and 8-22 have been examined.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5, 6, and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (hereinafter AAPA) in view of Hobson et al. U.S. Pat. No. 6633653 (hereinafter Hobson) and further in view of Liao et al. U.S. Pat. No. 6654479 (hereinafter Liao).

4. As per claim 1, 6, and 10, AAPA discloses a method of embedding a watermark in an information signal, comprising means for embedding said watermark in successive portions of the information signal (AAPA: page 1 lines 16-23). AAPA does not explicitly disclose embedding different versions of watermark and said versions being different with respect to a property which is irrelevant for detection of said watermark. However, Hobson discloses a watermark can be embedded into each block-by-block watermark scheme wherein each version has different magnitudes of Fourier coefficients which are not used for detection of said watermark (Hobson: column 6 lines 45-62: the magnitude of the coefficient of transformation are

variant and column 8 lines 34-44: apply in block by block watermarking scheme). It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to embed different versions of same watermark in different blocks because both are used in block by block watermarking method. Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to combine the teachings of Hobson within the system of AAPA because it increases security of data by using different version of same watermark on different blocks of the information signal thus making it more difficult to analyze watermark patterns and to detect tampering of image. AAPA as modified does not explicitly disclose the magnitudes are selected randomly according to no discernible pattern. However, Liao discloses randomizing the coefficients to generate different watermarks (Liao: column 1 line 64 – column 2 line 6; Davis: column 6 lines 16-26: Fourier transformation and other transformations). It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to randomize the magnitude of coefficient of Fourier transformation to generate different watermarks to increase the complexity of watermarks. Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to combine the teachings of Liao within the combination of AAPA-Hobson because generating different watermarks according to random numbers makes it more difficult to analyze the watermarking patterns.

5. As per claim 3, AAPA as modified discloses a method as claimed in claim 1. AAPA as modified further discloses wherein the watermark includes at least one basic watermark pattern being tiled over the portion of the information signal, said step of randomizing the magnitudes

being applied to the Fourier coefficients of said basic watermark pattern (AAPA: page 1 lines 16-23: one watermark pattern tiled over the image; Liao: column 1 line 64 – column 2 line 6: change the magnitude of coefficient; Hobson: column 6 lines 45-58). Same rationale applies here as above in rejecting claim 2.

6. As per claim 5 and 9, AAPA as modified discloses a method as claimed in claim 1 and 6 respectively. AAPA as modified further discloses wherein said successive portions of the information signal are successive frames of a motion video signal (AAPA: page 1 lines 16-23).

7. Claims 4, 8 and 11-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA in view of Hobson and further in view of Liao and further in view of Hayashi U.S. Pub. No. 20030161496 (hereinafter Hayashi).

8. As per claim 4 and 8, AAPA discloses a method as claimed in claim 1 and 6 respectively. AAPA as modified does not explicitly disclose the method comprising means for randomizing the position of the watermark with respect to the respective portion of the information signal. However, Hayashi discloses that limitation (Hayashi: [0143]-[0145]). It would have been obvious to one having ordinary skill in the art at the time of applicant's invention to combine the teachings of Hayashi within the combination of AAPA-Hobson-Liao because it improves secrecy of the embedded position of digital watermark information.

9. As per claim 11-22, claims 11-22 encompass the same scope as claims 1-10. Therefore, claims 11-22 are rejected based on the same reason set forth above in rejecting claims 1-10.

***Response to Arguments***

10. Applicant's arguments filed on 5/3/07 have been fully considered but they are not persuasive.

Regarding applicant's remarks, applicant argues that the Hobson reference discloses a block-by-block Fourier Transformation is applied to the image, not watermark. However, Hobson is relied upon for method of performing Fourier transformation on image on block-by-block basis such that when a image is embedded with a watermark, each block of the watermark image subjected to Fourier transformation will result in each watermark being in different version (Hobson: column 2 lines 16-22). Therefore, applicant's argument is respectfully traversed.

***Conclusion***

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shin-Hon Chen whose telephone number is (571) 272-3789. The examiner can normally be reached on Monday through Friday 8:30am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
